

# LED Square Garage Light

**GL80**  
LED Square Garage Light

**Promote safe driving. Deter theft. Lower operating costs.**

Parking garage light fixtures need to handle moisture, wind, and temperature changes. They also need to be bright enough to keep drivers and pedestrians safe – without increased energy or maintenance costs.

**The Litetronics LED Square Garage Light is an affordable and easy way for facility managers to upgrade parking garage lighting and improve safety.**

This fixture's bright, uniform light easily fills even the darkest corners. And its durability and energy efficiency mean lower operating costs, less maintenance, and reduced energy bills – especially when paired with occupancy sensors and daylight harvesting.

## **SPECS:**
